

# Avoid A Hair-Raising Experience

# Follow these safety tips:

- Never touch a downed electric power line. If you see one, call us immediately.
- Avoid overhead electric power lines when touching long-handled equipment, tall ladders, kites and TV antennas. If a kite string gets tangled in electric lines, call us and we'll remove it for you. Do not climb utility poles.
- Do not overload your circuits, electric outlets or extension cords. Don't use extension cords on a permanent basis. Don't cover them with carpet or other materials. Replace frayed electrical cords.
- Never touch electric equipment when you are bathing, standing on a wet floor or have wet hands.
