

How  
many  
citizens  
does it  
take  
to keep  
a street  
light on?

# All of us.

Street lights help keep our neighborhoods safe. We maintain all of the city's street lights, fixing the lights and changing lamps when they burn out. Though we patrol the major streets at night, we may not know when some lights need repairs or new bulbs.

That's why we need your help, too. We ask you to call us when you see:

- ✓ A street light off at night.
- ✓ A street light burning during the day.
- ✓ A street light flickering on and off.

When you call, be prepared to give us the closest address to the light. We will fix the light as quickly as possible. You also can call us when you see similar problems with your yard security light provided by our service.

## **How a street light works:**

The city's street lights have controls that are sensitive to sunlight. Lights turn on at dusk or in dark weather and turn off at daylight. Street lights last 15-20 years, but the normal life of the lamp inside is about four years. Keeping all of the street lights on requires constant vigilance.
